2082
Diploma in Compuer Engineering
Data Mining

1. What is data mining? Explain data mining system architecture with necessary diagram.
2. Explain the preprocessing steps in detail.
3. What are the characteristics of data warehouse? Differentiate between database and data warehouse.
4. Explain about different OLAP operation.
5. Find the frequent item sets and generate association rules on the following transaction using Apriovi Algorithm.

Transaction ID	Items
T1	I1, I2, I3
T2	I1, I2
T3	I1, I4, I5
T4	I4, I5
T5	I5, I3
T6	I1, I4, I5

Assume: Minimum suport threshold=33.33%
Minimum confident threshold=60%

© Ramit Pariyar

6. What is classification? Explain Bayesian classification with suitable example.

7. Define clustering.Explain about agglomerative and divisive clustering.

8. Compare classification with clustering. Describe text mining in details.

9. Why data mining is important? What are different aspects of security and privacy in data mining?

10. Write short notes:

A. OLAP servers

B. Association rules

C. K-means clustering

D. Support and confidence
